

Glitch or Glitch or Glitch or Glitch Feminism

A Manifesto | Legacy Russell

For DIGITALMAN, who:

001—Loved me and my avatar.

002—Championed journeying along this gorgeous loop.

003—Died before this was born[e],
but who birthed me, and for that, birthed this, too.

Still processing, you live here, in these pages, with us all.

*O, dear one we've lost, but who lives on, online.
For you, we write your name here, and occupy this space.*

Say their name.

Say their name.

Say their name.

fuck
the whole muthafucking thing
Etheridge Knight, "Feeling Fucked Up," 1986

01 – GLITCH REFUSES

NOPE

(a manifesto)

I am not an identity artist just because I am a Black artist with multiple selves.

I am not grappling with notions of identity and representation in my art. I'm grappling with safety and futurity. We are beyond asking should we be in the room. We are in the room. We are also dying at a rapid pace and need a sustainable future.

We need more people, we need better environments, we need places to hide, we need Utopian demands, we need culture that loves us.

I am not asking who I am. I'm a Black woman and expansive in my Blackness and my queerness as Blackness and queerness are always already expansive. None of this is as simple as "identity and representation" outside of the colonial gaze. I reject the colonial gaze as the primary gaze. I am outside of it in the land of NOPE.

Consider artist E. Jane's 2016 piece *NOPE (a manifesto)*. I begin here, with the words of *NOPE*, because bound up within them is the foundational refusal required "to glitch." *To glitch* is to embrace malfunction, and to embrace malfunction is in and of itself an expression that starts with "no." Thus E. Jane's *NOPE* helps us take these first steps.

E. Jane writes:

I am not an identity artist just because I am a Black artist with multiple selves.

I am not grappling with notions of identity and representation in my art. I'm grappling with safety and futurity. We are beyond asking should we be in the room. We are in the room. We are also dying at a rapid pace and need a sustainable future.

We need more people, we need better environments, we need places to hide, we need Utopian demands, we need culture that loves us.

I am not asking who I am. I'm a Black woman and expansive in my Blackness and my queerness as Blackness and queerness are always already expansive. None of this is as simple as "identity and representation" outside of the colonial gaze. I reject the colonial gaze as the primary gaze. I am outside of it in the land of *NOPE*.

Before talking about what glitch is or what it can do, let's meditate on the idea of a "[self] with multiple selves" and acknowledge that the construction of a self, creative or otherwise, is complex. E. Jane's naming and claiming of "multiple selves" pushes back against a flattened reading of historically othered

bodies—intersectional bodies who have traveled restlessly, gloriously, through narrow spaces. These are the selves that, as writer and activist Audre Lorde wrote in her 1978 poem “A Litany for Survival,” “live at the shoreline” and “were never meant to survive.”

To seize “multiple selves” is, therefore, an inherently feminist act: multiplicity is a liberty. Within their creative practice, E. Jane explores the freedom found in multiplicity, stretching their range across two selves: E. Jane and their “alter-ego” avatar Mhysa. Mhysa is a self-proclaimed “popstar 4 the underground cyber resistance” who crossed into some of E. Jane’s early artworks presented via the now-defunct “multimedia cultural hub” and “creation engine” NewHive.¹

E. Jane’s NewHive piece “MhysaxEmbaci-Freakinme” (2016) featured Mhysa in a pulsing field of lavender peonies, glittering lips, and moving bodies ever-so-slightly out of sync in the digital drag of a syncopated collage of sound and imagery. These two selves began as relatively distinct entities, with Mhysa “allowing [E. Jane] to be a part of [themselves that] white institutions tried to smother,” serving as an alter-ego that self-recorded and shared snippets of their own blooming becoming on Instagram, Twitter, and Facebook.² Then, in 2017, Mhysa released an LP with eleven tracks aptly titled *Fantasii*, marking the moment when “the slippage between IRL and URL” deepened as Mhysa performed songs and sets AFK, stepping out into E. Jane’s world and perforating the carefully constructed divide between on- and offline selfdom.³

E. Jane’s journey toward Mhysa, first as an avatar and then as an AFK extension of themselves, is one marked by finding room to roam, and finding their range. I think of the poet Walt Whitman’s 1892 poem “Song of Myself”:

Do I contradict myself?
Very well then I contradict myself,
(I am large, I contain multitudes.)

Whitman, a white man, was considered radically queer for his time. Within these lines of his, he captures a perfect snapshot of the problem of patriarchy, and of whiteness. Whitman is an agent bound up within a social and cultural status quo, yet that he “contain[s] multitudes” is his exercise of his right to be “large,” his capacity to “contradict” himself is his exercise of the right to be blurry, unfixed, abstract. Patriarchy exercises its social dominance by taking up space as its birthright; when patriarchy comes into contact with whiteness, it leaves little room for anything else. Space is not just claimed by those exercising

the “primary gaze” E. Jane speaks of, but is also made for them: space for becoming an unencumbered, range-full self and the agential complexity this provides is granted and protected for normative selves and the bodies they occupy.

What E. Jane fiercely protects—that expansive self—Whitman dons fearlessly, wholly unconcerned with the threat of having privilege taken from him. More than one hundred twenty years apart, they speak to each other through a void, yet look toward two very different worlds. When considering identity and the language often used to speak of it (e.g., “the mainstream” and those “at the margins”), it comes as little surprise that under white patriarchy, bodies—*selves*—that cannot be defined with clarity by the “primary gaze,” are pushed from the center. There, a Black queer femme body is flattened, essentialized as singular in dimension, given little room to occupy and even less territory to explore. As flat shadowy figures standing at the margins, we are stripped of the right to feel, to transform, to express a range of self.

The history of this sort of flattening or “othering” is one that has deep roots within a painful narrative of race, gender and sexuality in America, but also remains consistent across a world history of war. Where imperialism has touched, where neocolonialism continues, the force of flattening can be found. If one can render another body faceless and unrecognizable, if one can pin another as subhuman, it becomes easier for one group to establish a position of supremacy over another.

Violence is a key component of supremacy and, as such, a core agent of patriarchy. Where we see the limitation of a body’s “right to range,” be it at an individual or state level, we see domination.

E. Jane is not being hyperbolic when they write that we are “dying at a rapid pace.” Pushed to the margins, we find ourselves as queer people, as people of color, as femme-identifying people most vulnerable in weathering world conditions, ranging from climate change to plantation capitalism. Thus, envisioning what shape a sustainable future might take, finding safe “places to hide” in addition to techniques that provide space for ourselves, is urgent.

Glitch is all about traversing along edges and stepping to the limits, those we occupy and push through, on our journey to defining ourselves. Glitch is also about claiming our right to complexity, to range, within and beyond the proverbial margins. E. Jane is correct: we *do* “need places to hide, we need Utopian demands, we need culture that loves us.”

The imaginative architecture of utopia remains ever present in glitch feminism. It gives us home and hope. In 2009, academic and queer theorist José

Esteban Muñoz wrote in his *Cruising Utopia*, “Queerness is that thing that lets us feel that this world is not enough, that indeed something is missing.”⁴ In this “something missing” is desire, a wanting of a better world, a rejection of the here and now. Muñoz observes, “We have been cast out of straight time’s rhythm, and we have made worlds in our temporal and spatial configurations.”⁵ A refusal of “straight time” and, via extension, of a Eurocentric model of time and space, E. Jane posits a NOPE that does not settle for a world or a social system that fails us.

The oblique romance of Internet-as-utopia, against this backdrop reality, should not be dismissed as naïve. Imbuing digital material with fantasy today is not a retro act of mythologizing; it continues as a survival mechanism. Using the Internet to play, perform, explore still has potential. Giving ourselves this space to experiment perhaps brings us closer to a projection of a “sustainable future.”

The same is true online as AFK. All technology reflects the society that produces it, including its power structures and prejudices. This is true all the way down to the level of the algorithm. The outmoded myth, however, that equates the digital and the radical continues to prove counterfeit. Normative cultural institutions and the social construct of taxonomical norms—gender, race, class—within them are quick to marginalize difference. Paradoxically, the very nature of these differences titillate, are labeled as “wild.” Nevertheless, this wildness is permitted just as long as it is properly maintained, growing only within its prescribed space. Just as physical institutions lack intelligence and awareness, so do institutions of the digital—Facebook, Twitter, Instagram, Snapchat, TikTok. These are the institutions (re)defining the future of visual culture; they are also, without question, deeply flawed.

In the spring of 2018, in the midst of #MeToo, a Snapchat ad surfaced asking viewers if they would prefer to “slap Rihanna” or “punch Chris Brown,” which resulted in a backlash of outrage about its making light of singer Rihanna’s 2009 domestic abuse at the hands of her then-partner, singer Chris Brown. High-profile individuals such as former rapper Joe Budden and media figure Chelsea Clinton voiced their support of Rihanna, and their general horror regarding the distasteful ad on Twitter. Rihanna herself went to Instagram, a rival to the Snapchat platform, to “talk back” to Snapchat, writing: “You spent money to animate something that would intentionally bring shame to DV victims and made a joke of it.”⁶ In the days that followed, Snapchat stock lost \$800 million⁷. Rihanna exercised her own refusal, her nonperformance by stepping back from a Snapchat “public,” an intervention in which she raised a fist in solidarity with survivors of domestic abuse.

The paradox of using platforms that grossly co-opt, sensationalize, and capitalize on POC, female-identifying, and queer bodies (and our pain) as a means of advancing urgent political or cultural dialogue about our struggle (in addition to our joys and our journeys) is one that remains impossible to ignore. At these fault lines surface questions of consent—yours, mine, ours—as we continue to “opt-in,” feeding our “selves” (e.g., our bodies as represented or performed online) into these channels. To quote poet Nikki Giovanni: “Isn’t this counter-revolutionary[?]”⁸

Perhaps, yes. However if we assume that Audre Lorde’s 1984 declaration that “the master’s tools will never dismantle the master’s house” still holds true, then perhaps what these institutions—both online and off—require is not dismantling but rather mutiny in the form of strategic occupation. The glitch challenges us to consider how we can “penetrate ... break ... puncture ... tear” the material of the institution, and, by extension, the institution of the body.⁹ Thus, hacking the “code” of gender, making binaries blurry, becomes our core objective, a revolutionary catalyst. Glitched bodies—those that do not align with the canon of white cisgender heteronormativity—pose a threat to social order. Range-full and vast, they cannot be programmed.

Glitched bodies are not considered in the process of programming new creative technologies. In 2015, Google’s image-recognition algorithm confused Black users with gorillas. The company’s “immediate action” in response to this was “to prevent Google Photos from ever labelling any image as a gorilla, chimpanzee, or monkey—even pictures of the primates themselves.”¹⁰ Several years later, Google’s 2018 Arts & Culture app with its museum doppelgänger feature allowed users to find artwork containing figures and faces that look like them, prompting problematic pairings as the algorithm identified look-alikes based on essentializing ethnic or racialized attributes.¹¹ For many of us, these “tools” have done little more than gamify racial bias. These technologies underscore the dominant arc of whiteness within art historical image-making and the dissemination of those images in a marketplace that presents deep biases of its own. They also highlight the structural inequality inherent to the creation of these tools themselves, with such algorithms created for and by whiteness, and so echo the exclusionary and violent art historical canon.

Online, we grapple with multiplying questions of use, participation, and visibility. Never before in history has there been such an opportunity to produce, and access, so many different types of publics. In 1995, poet and activist Essex Hemphill mused, “I stand at the threshold of cyberspace and wonder, is it possible that I am unwelcome here, too? Will I be allowed to construct a virtual

reality that empowers me? Can invisible men see their own reflections?”¹²

Today Hemphill’s questions endure, made even more complicated by the fact that the “public” of the Internet is not singular or cohesive but divergent and fractal. What’s more, the “space” of cyberspace that Hemphill calls upon has shown itself not to be a universally shared utopia. Instead, it is a space with many worlds, and within these worlds, vastly different understandings of what utopia might look like or become—and for whom. The Internet is an immersive institutional edifice, one that reflects and surrounds. There is no fixed entry-point: it is everywhere, all around us. Thus, the notion of Hemphill’s “threshold” has since timed out.

This search for our “own reflections”—recognizing oneself within digital material and the electric black mirror that carries it—is bound up inextricably with a search for self-recognition away from the screen as well. Othered bodies are rendered invisible because they cannot be read by a normative mainstream and therefore cannot be categorized. As such, they are erased or misclassified within and outside of an algorithmic designation. Perhaps, then, this “land of NOPE” that E. Jane speaks of in their manifesto is the exact utopia Hemphill calls out for, that sacred ground where our digital avatars and AFK selves can be suspended in an eternal kiss. A land where we do not wait to be welcomed by those forces that essentialize or reject us but rather create safety *for* ourselves in ritualizing the celebration of ourselves.

With this, the digital becomes the catalyst to a variance of selfdom. With each of us “invisible men,” we remain responsible for manifesting our own reflections, and through today’s Internet, we can find ways to hold those mirrors up for one another. Thus, we are empowered via the liberatory task of seizing the digital imaginary as an opportunity, a site to build on and the material to build with.

Glitch manifests with such variance, generating ruptures between the *recognized* and *recognizable*, and amplifying within such ruptures, extending them to become fantastic landscapes of possibility. It is here where we open up the opportunity to recognize and realize ourselves, “reflecting]” to truly see one another as we move and modify. Philosopher and gender theorist Judith Butler observes in her *Excitable Speech: A Politics of the Performative*, “One ‘exists’ not only by virtue of being recognized, but ... by being recognizable.”¹³ We delineate ourselves through our capacity for being recognizable; we become bodies by recognizing ourselves and, in looking outward, by recognizing aspects of our self in others.

Through Hemphill’s musing on “reflections” in cyberspace, he makes plain

the lack thereof within a broader social milieu, with the still-limited prevalence of such “reflections” both on- and offline. We will always struggle to recognize ourselves if we continue to turn to the normative as a central reference point. In a conversation between writer Kate Bornstein and trans artist, activist, and producer Zackary Drucker, Bornstein observed, “When gender is a binary, it’s a battlefield. When you get rid of the binary, gender becomes a playground.”¹⁴

The etymology of *glitch* finds its deep roots in the Yiddish *gletshn* (to slide, glide, slip) or the German *glitschen* (to slip). *Glitch* is thus an active word, one that implies movement and change from the outset; this movement triggers error.

The word *glitch* as we now use and understand it was first popularized in the 1960s, part of the cultural debris of the burgeoning American space program. In 1962, astronaut John Glenn used the word in his book *Into Orbit*: “Another term we adopted to describe some of our problems was ‘glitch.’ Literally, a glitch ... is such a minute change in voltage that no fuse could protect against it.”¹⁵ The word resurfaced some years later in 1965 with the *St. Petersburg Times* reporting that “a glitch had altered the computer memory inside the US spacecraft Gemini 6”; still again in the pages of *Time Magazine*: “Glitches—a spaceman’s word for irritating disturbances.”¹⁶ Later, in 1971, “glitches” appears in an article in the *Miami News* about Apollo 14’s failure to perform when a glitch had nearly botched a landing on the moon.

Traversing through these origins, we can also arrive at an understanding of glitch as a mode of nonperformance: the “failure to perform,” an outright refusal, a “nope” in its own right, expertly executed by machine. This performance failure reveals technology pushing back against the weighty onus of function. Through these movements, technology does, indeed, get slippery: we see evidence of this in unresponsive pages that present us with the fatalistic binary of choosing to “kill” or “wait,” the rainbow wheel of death, the “Sad Mac” iconography, a frozen screen—all indicative of a fatal system blunder.

Herein lies a paradox: glitch moves, but glitch also blocks. It incites movement while simultaneously creating an obstacle. Glitch prompts and glitch prevents. With this, glitch becomes a catalyst, opening up new pathways, allowing us to seize on new directions. On the Internet we explore new publics, engage with new audiences, and, above all, *glitschen* between new conceptions of bodies and selves. Thus, glitch is something that extends beyond the most literal technological mechanics: it helps us to celebrate failure as a generative force, a new way to take on the world.

In 2011, the theorist Nathan Jurgenson presented his critique of “digital

dualism,” identifying and problematizing the split between online selfhood and “real life.” Jurgenson argues that the term *IRL* (“In Real Life”) is a now-antiquated falsehood, one that implies that two selves (e.g., an *online* self versus an *offline* self) operate in isolation from each other, thereby inferring that any and all online activity lacks authenticity and is divorced from a user’s identity offline. Thus, Jurgenson advocates for the use of *AFK* in lieu of *IRL*, as *AFK* signifies a more continuous progression of the self, one that does not end when a user steps away from the computer but rather moves forward out into society away from the keyboard.

The glitch traverses this loop, moving beyond the screen and permeating every corner of our lives. It shows us that experimenting online does not keep us from our *AFK* selves, nor does it prevent us from cultivating meaningful and complex collaborative communities beyond our screens. Instead, the polar opposite: the production of these selves, the digital skins we develop and don online, help us understand who we are with greater nuance. Thus, we use glitch as a vehicle to rethink our physical selves. Indeed, the body is itself an architecture that is activated and then passed along like a meme to advance social and cultural logic. Historically, feminism was built on this mired foundation, first advocating for parity yet paradoxically not always across all bodies, or without anti-sexist, anti-racist, anti-classist, homophobic, transphobic, and ableist aims central to its agenda. As a movement, the language of feminism—and, more contemporarily, “lifestyle feminism”—has in large part been codependent on the existence of gender binary, working for change only within an existing social order.¹⁷ This is what makes the discourse around feminism so complicated and confusing.

Feminist theorist Donna Haraway’s legendary 1984 construction of “the cyborg” within “A Cyborg Manifesto”—on which so many discussions of techno- and cyberfeminism have been built—complicates our understanding of bodies further. Haraway’s cyborg actively argues away from the lexicon of the human, a classification that historically othered bodies (e.g., people of color, queer people) have long fought to be integrated into. Hindsight is 20/20: Haraway in 2004 looked back on her manifesto, noting, “A cyborg body is not innocent ... we are responsible for machines ... Race, gender, and capital require a cyborg theory of wholes and parts.”¹⁸

In 1994, cultural theorist Sadie Plant coined the term “cyberfeminism.” As a historical project and as ongoing politics, cyberfeminism remains a philosophical partner to this discourse on glitch: it looks to online space as a means of world-

building, challenging the patriarchal normativity of an “offline mainstream.” Yet the early history of cyberfeminism mirrored the early history of AFK feminism in its problematic reapplication of first- and second-wave feminist politics within what at that point was a third-wave feminist culture well underway.

Early cyberfeminists echoed early AFK first-wave feminist rhetoric in being phobic of transnational allyship. The public face of cyberfeminism was regularly championed and fetishized as one of white womanhood—Sadie Plant, Faith Wilding, N. Katherine Hayles, Linda Dement, to name a few pioneers—and found dominant support within the realm of art school academia. This reality demarcated digital space as both white and Western, drawing an equation: *white women = producing white theory = producing white cyberspace*.

This white cyberfeminist landscape marginalized queer people, trans people, and people of color aiming to decolonize digital space by their production via similar channels and networks. Exceptions such as the Old Boys’ Network, SubROSA, or the VNX Matrix were impactful in offering up alternative discourse that recognized peripherally racism alongside sexism, but the hypervisibility of white faces and voices across feminist cyberculture demonstrated ongoing exclusion, even within this new, “utopic” setting.

Despite this, those early days of cyberfeminism lay important groundwork in introducing the technological, the digital, even the cybernetic as a computational imaginary to mainstream feminism. With cyberfeminism, feminists could newly network, theorize, and critique online, transcending (if only temporarily, if only symbolically) sex, gender, geography. With this also came a foundational awareness of how power operates as an agent of capitalism within the edifice of online space, spurred forth by technological builders who shape how we as users experience digital worlds and their politics.

Feminism is an institution in its own right. At its root is a legacy of excluding Black women from its foundational moment, a movement that largely made itself exclusive to middle-class white women. At the root of early feminism and feminist advocacy, racial supremacy served white women as much as their male counterparts, with reformist feminism—that is, feminism that operated within the established social order rather than resisting it—appealing as a form of class mobility. This underscores the reality that “woman” as a gendered assignment that indicates, if nothing else, a right to humanity, has not always been extended to people of color.

Feminist “sisterhood” toward the purpose of increasing white range and amplified social, cultural, economic mobility, is an exercise in service of supremacy—for *white women only*. This is the ugly side of the movement: one

where we acknowledge that while feminism is a challenge to power, not everyone has always been on the same page about who that power is for and how it should be used as a means of progress. *Progress for whom?* Thus, American abolitionist, women's right activist, and freed slave Sojourner Truth's question "Ain't I a woman?" asked in 1851 continues to be painfully resonant even today, surfacing the ever-urgent reality of who is brought into the definition of womanhood and, via extension, who is truly recognized as being fully human.

As we wade our way through contemporary feminisms and the negotiations of power embodied by #BlackLives Matter, #MeToo, or the tradition of the Women's March, we must recognize that these movements are defined and driven by technology, harbingers of a promising and potentially more inclusive "fourth wave" unfolding on the horizon. Still, the dangerous vestiges of first- and second-wave histories linger on. Writer, activist, and feminist bell hooks may have declared that "feminism is for everybody," but what remains is still a long and winding road ahead until we get there.

Where *glitch* meets *feminism* in a discourse that problematizes the construct of the body, it is important to call out the historical construction of gender as it intersects with a historical construction of race. The body is a social and cultural tool. Because of this, the right to define what a body is, in addition to who can control these things called "bodies," has never been meted out equally. In a contemporary landscape where the term "intersectional" is bandied about with such ease, it is important to acknowledge the work of blackness in particular toward the project of feminism.

Sojourner Truth's urgent inquiry can also shine light on the queer body across a spectrum of identification. In a contemporary setting Truth's line of inquiry calls for the recognition of humanity and a future that celebrates bodies of color, bodies that femme-identify, bodies that embrace the in-between and beyond, all as an active resistance, a strategic blur of binary. We cannot forget: it was, and continues to be, the presence of blackness that aided in establishing a primary precedent for the notion of intersectionality within feminism. *Intersectionality* as a term was coined in 1989 by theorist and activist Kimberlé Crenshaw to speak to the realities of blackness and womanhood as part of a lived experience, neither half exclusive of one another, but rather advancing the work of both sides. Crenshaw's enduring contribution bolsters the foundation for the early thinking that drove making space for multiplicity across selves within a broader social and cultural context, one that resonates today both online and AFK alike.

As German artist and cyberfeminist Cornelia Sollfrank observes:

“Cyberfeminism does not express itself in single, individual approaches but in the differences and spaces in-between.”¹⁹ It is in the space between that we as glitch feminists have found our range, our multiple and varied selves. Thus, the work of blackness in expanding feminism—and, by extension, cyberfeminism—remains an essential precursor for glitch politics, creating new space and re-defining the face of a movement, amplifying the visibility of historically othered bodies.

We can find examples of this in texts such as writer Octavia Butler’s 1980s *Xenogenesis* trilogy, which galvanizes the notion of a third sex futurity that defies binary gender. Or Audre Lorde’s discussion of the erotic as power in her 1978 paper “Uses of the Erotic: The Erotic as Power,” which encourages us to discover our full range through a self-connection that delivers joy. These contributions did not rise up out of cyberfeminism, but they have transformed, expanded and liberated it. Such alchemy makes limitless the capacity of glitch to mobilize.

Let us revisit, occupy, and decolonize Whitman’s words in our call for refusal:

Do I contradict myself?
Very well then I contradict myself,
(I am large, I contain multitudes.)

Acknowledgements

“Digital Dualism and the Glitch Feminism Manifesto” was first published in 2012, commissioned by theorist Nathan Jurgenson for *The Society Pages*, and then later expanded into a short essay commissioned by the new media art publication *Rhizome*. In the spring of 2013, my paper on glitch feminism was accepted into University of Sussex’s “Queer Feminist Social Media Praxis Workshop,” and later that fall my paper was also accepted into University of Surrey’s “Corporeal Computing: A Performative Archaeology of Digital Gesture” conference. This was the start of something wonderful, and exponentially bigger than me, as the author of this little book.

Since then glitch feminism has gone viral, traveling far and wide from its site(s) of origin. It has been included in feminist and art history syllabi at a variety of institutions: the Courtauld Institute of Art (UK), the Royal Academy (UK), Evergreen State College (US), University of California at Santa Cruz (US), and beyond. It has been included in publications and productions put forward by the *F Word* (UK), Kingston University (UK), the Photographers’ Gallery (UK), Stockholm University (SW), University of Massachusetts Amherst (US), Boston University (US), McGill University (Canada), and beyond.

I have been fortunate to journey with glitch feminism internationally, participating in forums such as “Theorizing the Web” held at the International Center of Photography (2015, US); “Technofeminism Now,” “Technology Now: Blackness on the Internet,” and then “Post-Cyber Feminist International” all held at the Institute of Contemporary Arts London (2015, 2016, 2017, UK); the Wonder Woman Festival at Castlefield Gallery (2017, UK); Arcadia University (2017, UK); the Forum for Philosophy at the London School of Economics (2017, UK); “Decolonizing Bots” at Het Nieuwe Instituut (2017, NL); Impakt Festival (2017, NL); Transmission Gallery and the Centre for Contemporary Arts Glasgow (2018, UK); School of Visual Arts (2018, US); “<Interrupted =

Cyfem and Queer>” symposium (2018, DE); Mapping Festival (2018, CH); “Re/Dissolution: Learning from Pixels” symposium at the Academy of Fine Arts Munich (2018, DE); Rewire Festival 2018 (2018, NL); Eyebeam’s “Refiguring the Future” conference (2019, US), and more. This is proof that glitch feminism is living material and part of an urgent conversation, ongoing. I am eternally grateful to those bbz who organized the panels and events at which I presented glitch feminism and for all those who took the time to attend and critically engage with a work-in-progress.

All this is to say that what lies within the pages of this book began with outrage, desire, concern, joy. It surged from some of my own darkest moments as a queer body in motion, and lit the way, allowing me to advance with courage. It is part of an exigent global dialogue.

Outside of *The Society Pages* and *Rhizome*, an earlier excerpted form of this text meditating on some of the ideas shared here was published in 2018 in an independent compilation titled *Alembic*, put forward by the gallery and workspace Res. in Deptford, South East London.

Glitch Feminism as a manuscript grew and found its footing in conversations with beloved folx Elizabeth Koke (who literally guided it from the dancefloor of Nowhere Bar, out into the daylight) and Angelica Sgouros (also on the dancefloor at Nowhere Bar), who carried this work far beyond with strength, vision, courage. Early research as I began this book came from two super rad research assistants: the inspiring poet, artist, star-child Caspar Heinemann, and the equally inspiring writer and editor Laura Bullard. The structure of and material for my glitch feminist lectures starting in 2017 were composed with care by Anna Carey, who brought the viscosity of glitch feminism to new heights with her keen eye for design and savvy Keynote slay.

In performance lecture form from the dot and now here, too, *Glitch Feminism* celebrates the important creative contributions and very necessary work of E. Jane (and their Mhysa), manuel arturo abreu, and Shawné Michaelain Holloway. Honor them with me.

Other folx who encouraged, celebrated, challenged, and galvanized this work, listed alphabetically: Alexandra Bynoe-Kasden, Andrew Cappetta, Brittni Chicuata, Nora Clancy, Bibi Deitz, Rosalie Doubal, Thelma Golden, my brilliant and very woke editor Leo Hollis, Madeleine Hunt-Ehrlich, Lena Imamura, Andreas Laszlo Konrath, Moira Kerrigan, Taylor LeMelle, Kamala Mottl (*aloha wau ia ‘oe*, “Geeve um!”), Kaitlin Kylie Pomerantz, Angola Russell, Ernest Russell (DIGITALMAN), Hannah Sullivan, Sarah Shin, Mark Tribe, McKenzie Wark, Zadie Xa. I am in eternal debt and gratitude for the Carl and

Marilynn Thoma Art Foundation and the Robert Rauschenberg Residency for the support they have provided me in the creation of this manuscript. There have also been so many amazing folx who took the time to be vulnerable, passionate, wild, wonderful, and who wrote me with their own personal stories, thoughts, and positive vibes over the course of my writing: To each of you, your words arrived just in time, gave me insight, brought me back from the edge, and carried me forward with confidence and self-determination in my heart.

Finally, to all the artists, writers, thinkers, and gender-hackers included in these pages: I am deeply grateful for the work you put forward into the world, the multitudinous selves you bravely share online and AFK, and the eternal solidarity you show as we continue to co-conspire in breaking the binary code.

Cyberfam: In all your brilliance and allyship, I thank you for your vision, your refusal, and, above all, your love. You are everything.

USURP THE BODY! BECOME YOUR AVATAR!

Notes

00 – Introduction

1. In this text I will celebrate the use of capital B for “Black”. “Blackness” will maintain lower case b in the interest of making space for the ontological framework that blackness proposes across a cultural, social, political discourse.
2. James C. Scott, *Seeing Like a State: How Certain Schemes to Improve the Human Condition Have Failed*, New Haven, CT: Yale University Press, 1999, p.183.
